Applicant's election with traverse of Group I, claims 1-25 and 31-33 in the reply filed on 12-27-4 is acknowledged. The traversal is on the ground(s) that examination of claims 26-30 would incur no burden. This is not found persuasive because the reasons for insisting on restriction as stated in MPEP 808 have been clearly met.

The requirement is still deemed proper and is therefore made FINAL.

This application contains claims directed to the following patentably distinct species of the claimed invention: The species of a layer of silicon dioxide and silicon nitride.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from the species of a layer of silicon dioxide and silicon nitride for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 31 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected from the species of a layer of silicon dioxide and silicon nitride consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

This application contains claims directed to the following patentably distinct species of the claimed invention: The species of a non-fluorinated etch chemistry, a hydrogen and bromine etch chemistry, a hydrogen bromide etch chemistry and a chlorine etch chemistry.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from the species of a non-fluorinated etch chemistry, a hydrogen and bromine etch chemistry, a hydrogen bromide etch chemistry and a chlorine etch chemistry for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 31 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected from the species of a non-fluorinated etch chemistry, a hydrogen and bromine etch chemistry, a hydrogen bromide etch chemistry and a chlorine etch chemistry consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent

form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
